

# Application Server on Cloud

## After you complete this unit, you should understand:

- How you can get WebSphere Application Server experience on the Cloud
- How you can leverage enterprise features like transactions on the Cloud
- How you can use Shell and Admin Console/Center on the Cloud
- How you can customize WebSphere environment for your apps on the Cloud

**Application Server on Cloud for Bluemix** reduces deployment time, increases consistency, and fosters agility.

### WebSphere Application Server

Same WAS you know and love.  
Same features, capabilities and security.

### Bluemix

Your route to get your applications to the Cloud. Build, run, deploy and manage applications on the cloud with ease.

### IBM Application Server on Cloud for Bluemix

Takes WAS to the next level with comprehensive cloud orchestration to help you extend and evolve your applications.

#### Innovative App Server

Flexible environment for a lightweight, dynamic application runtime or an advanced, large-scale application platform.

#### Extend apps with services

A catalog of IBM, third party, and open source services to grow your solution.

#### Lift & shift WAS to cloud

Rapidly bring your apps to Cloud and drive faster solution delivery ahead of the competition.

#### Rapidly deliver rich experiences

Comprehensive set of open standard programming models to better align project needs with capabilities and developer skills.

#### Flexible Pricing

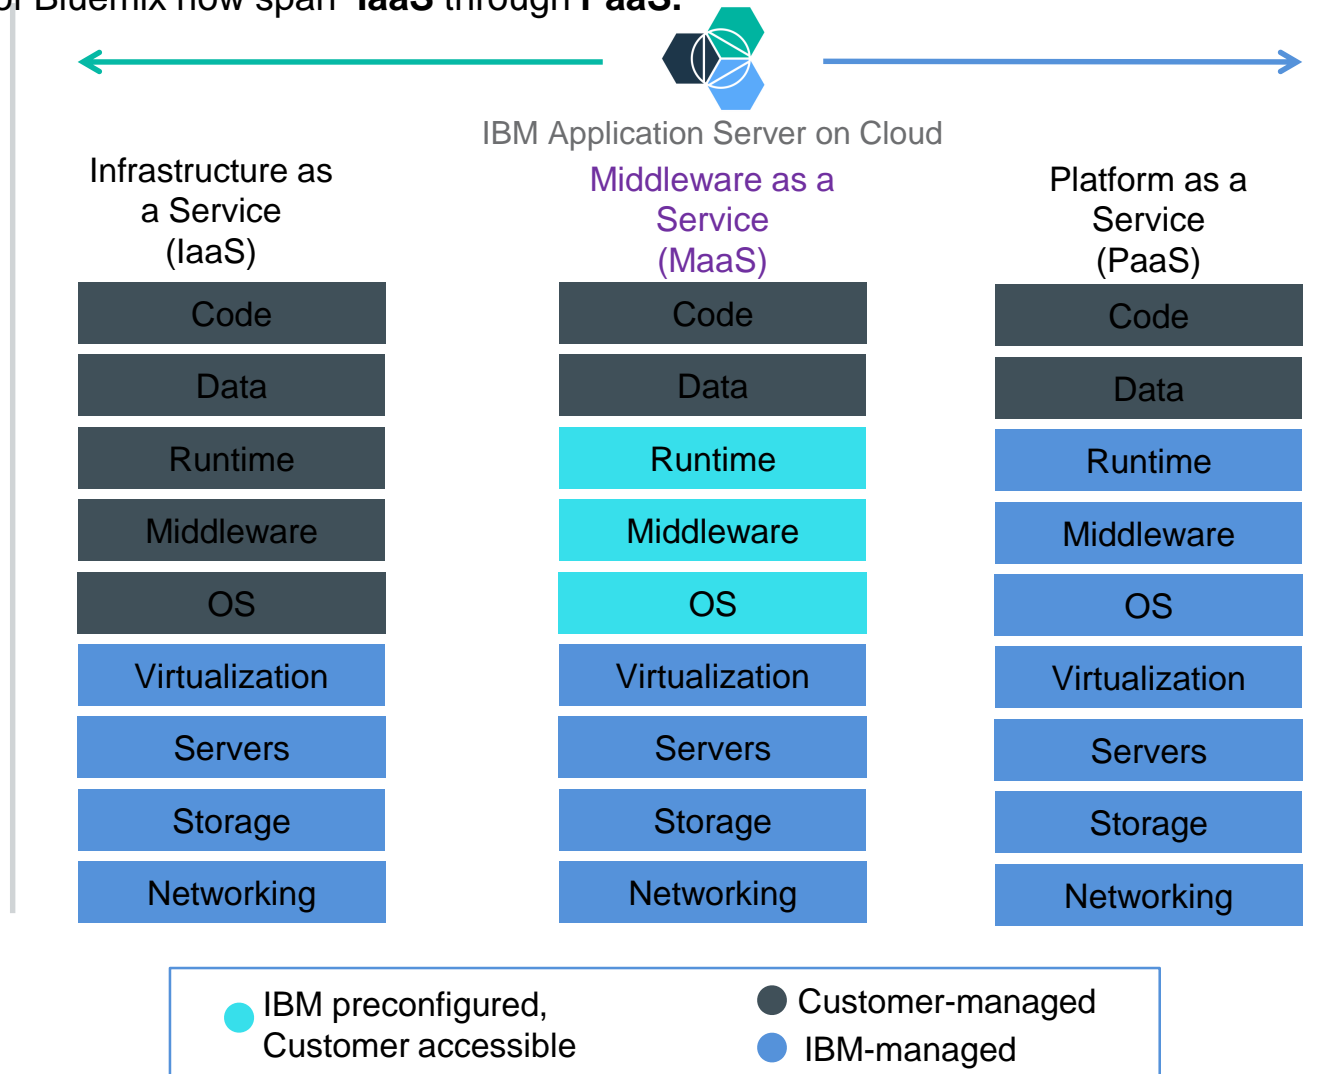

Try some services for free and when you're ready, pay only for what you use. Pay as you go and subscription models offer choice and flexibility.

#### Best of both worlds

Balance cloud economics and agility with WAS quality, security and governance.

# Application Server on Cloud provides middleware as a service for WebSphere Application Server workloads.

Capabilities of Bluemix now span **IaaS** through **PaaS**.

# Application Server on Cloud provides the same WebSphere Application Server with the speed and simplicity of the Cloud!

## Develop, Test and Run

IBM Application Server on Cloud

Traditional  
WebSphere

### Robust , proven & consistent Java Runtime

WebSphere Application Server provides the optimal infrastructure for a wide spectrum of emerging workloads. Identical Interfaces & Experience for Developers and Operations.

Cloud  
Enabled

### Deploy WAS applications in the Cloud seamlessly

Bring your Traditional WAS & Liberty application to pre-optimized off-premise hosting environment without change.

Do More  
with Less

### Reduce capital expenditures and operational expenses

Leverage Pay-as-You-GO or Subscription to WAS workloads in repeatable and reliable deployments in the Cloud. You can achieve savings by optimizing labor efficiency with hosted hardware consolidation & utilization.

Faster

### Accelerate WAS Application Delivery in the Cloud

Compared to "Roll your Own", Deploy apps into test and/or production in minutes, not months. Increase ability to quickly deliver results to capitalize on business opportunities.

IBM Pre-configured,  
Customer Accessible

[VIEW DOCS](#)

The IBM Application Server on Cloud gives you the WebSphere Application Server experience in Bluemix. Choose between Full Profile or Liberty Profile of WebSphere Application Server, preconfigured and hosted on your own Red Hat Enterprise Linux guest.

- **WebSphere Experience**

Reuse your WebSphere administration skills and scripts to ease your transition to cloud.

- **Shell and Admin UI Management**

Use a secure shell, or log into the Admin Center/Console to control your WebSphere environment.

- **Use. Abuse. Repeat.**

It's a cloud service after all. Use it for an hour. Drive it hard. Delete it. Grab a new one when you need it; it's up to you.

- **Full-Feature Application Servers**

Leverage sophisticated enterprise features like transactions, just like you do on-premise.

- **Customize just what you need**

We've already installed and configured WebSphere, now all you have to do is make those minor changes to get your application just the way you need it.

## Admin Center and Admin Console Links

# Application Server on Cloud provides easy data integration and enterprise connectivity

Integration and data capabilities are accessible making **hybrid application** architecture even easier and more flexible.

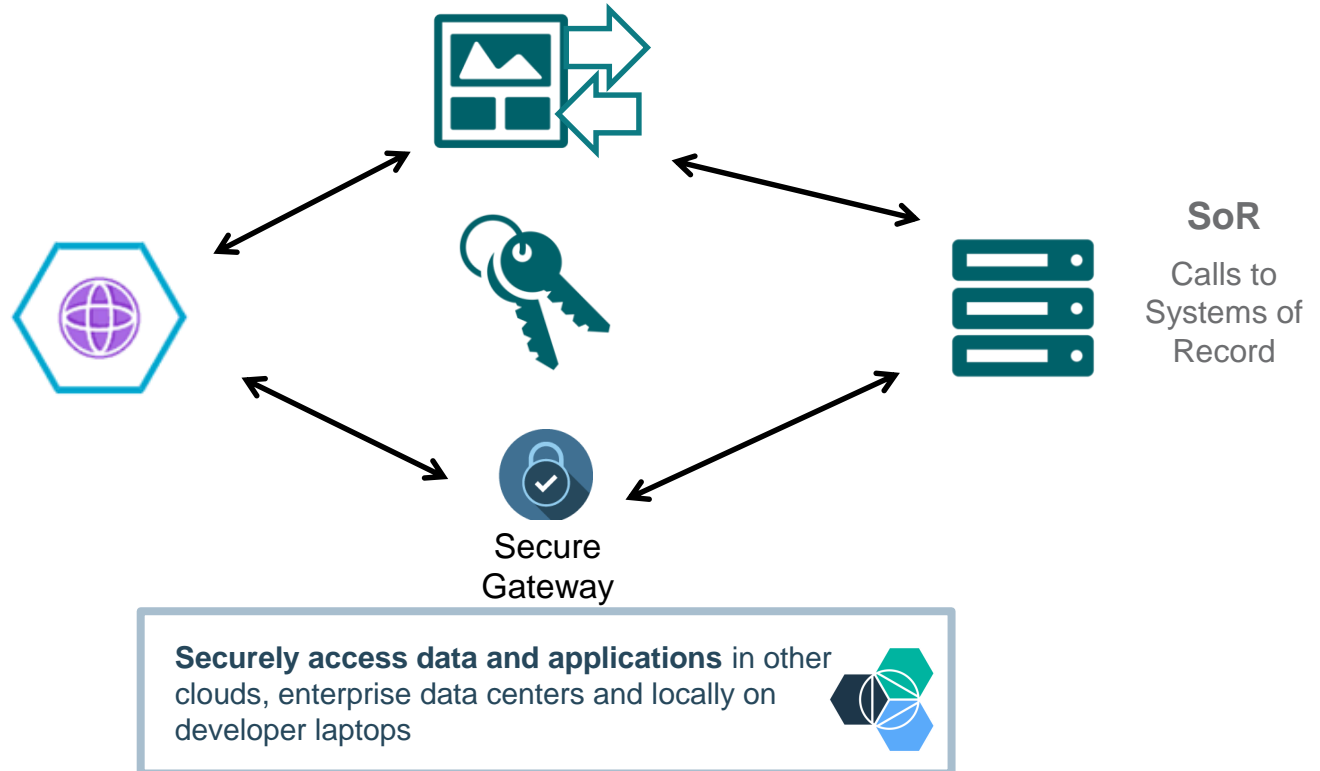

## Develop, Test, and Run

IBM Application Server on Cloud

## VPN

Leverage OpenVPN for secure connection to Systems of Record running in your network

# Application Server on Cloud popular starter use cases

## Develop, Test, and Run

IBM Application Server on Cloud

## Internal Pilot project

- Proving the business value of new projects
- Try out a newer version of WebSphere Application Server for a short time

## Hybrid cloud development

- As a development environment for WebSphere Application Server
- Get started fast during on-prem WebSphere Application Server installation/setup is in parallel

## Instead of their own WAS Installation

- Prefer cloud solutions to on-prem licensed product
  - Organizations with small IT departments
- As a target for clients struggling with their own on-prem or RYO WAS Cloud infrastructure
  - Urgency for implementation (quick time to value)

## Sign up in minutes. Pay for what you use

### Friction-free adoption

- **10 Instance Hours Included each Month:** designed to allow testing of an application on the platform
- **Free tier for many Bluemix services:** encourages experimentation of new services for applications already running on Bluemix

### Multiple commitment models

- **Pay-as-you-go:** optimized for flexibility, no term commitment
- **Subscription:** term-based and optimized for cost, discounted from pay-as-you-go rates

### Self-service

- Zero to coding in **less than 5 minutes**
- **Credit card** over the web in many countries or through your IBM rep

#### IBM manages:

- 24/7 support
- Platform configuration
- Platform uptime
- Platform monitoring
- Platform high availability
- High availability
- WAS product updates
- Platform scheduled maintenance with advanced notice

#### Customer manages:

##### WAS maintenance

Version updates on customer's schedule

##### Capacity and scaling

By default, we provide capacity in customer's regional data center. Additional capacity available by adding my Instances!

# Application Server on Cloud provides simple plan options

One Instance of a plan equates to **1vCPU with 2 GB RAM, and 12 Gig HD** capacity priced by **Instance-Hour**

## Develop, Test, and Run

IBM Application Server on Cloud

|   |  |
|---|--|
| <b>BYOL Plan</b><br>Current Active WAS S&S Customer can bring licenses of WAS to run on this Offering. This plan will deploy Pre-configured WAS based on existing entitlement. ( <b>Subscription Only</b> ) | <b>\$0.30/Hr or \$222/Mo</b>   |
| <b>Liberty Core Plan</b><br>Pre-configured Instances based on Liberty Core  | <b>\$0.41/Hr or \$304/Mo</b>   |
| <b>WAS Base Plan</b><br>Pre-configured Instances based on WebSphere Application Server Full Profile.  | <b>\$0.52/Hr or \$389/Mo</b>   |
| <b>WAS ND Plan</b><br>Pre-configured Instances based on WebSphere Application Server Network Deployment   | <b>\$1.14/Hr or \$845/Mo</b>   |
| <b>(Optional) Bluemix Standard Support</b><br>Developers forum.<br>Ticketing system with 24-hour response.<br>Connect with IBM technical staff.<br>Covers IBM Bluemix offerings and features.               | <b>10% of account charges, with a minimum monthly charge of \$200.00 USD</b> |

Approximate monthly Price based on 744 Instance Hours per month.

# Technical Details for October 2015 availability

- Pay for the capabilities you need:
  - Liberty Core, WAS Base and WAS ND plans available
- New service instances created from best practices and recent service levels:
  - WAS configured instances built from 8.5.5.6 and important RHEL 6.6. RPMs
- Root access gives you the freedom to make those small configuration and setting changes that you need to make your application behave as you'd expect
- IM repositories and RPM Satellite service allow you update existing service instance maintenance
  - 8.5.5.7 populated and available and can be applied to existing service instances
- Guest fixed size
  - 2 GB RAM, 12 GB Disk, 1 vCPU
- Shared environment
  - Shared resource pool: CPU, memory, disk
  - Shared networking environment, shared VPN

# Recap

In this session, you learned that Application Server on Cloud

- Is a middleware as a service that can reduce deployment time of enterprise apps on the cloud
- Can help in integration with on-premises systems of record
- Has a payment plan option that can help your organization easily develop, test, and run enterprise applications on the cloud
