Optimizing Java Apps on IBM Cloud

© 2015 IBM Corporation

Java cloud developer—code once and target your apps for enterprise or cloud

eclipse Move your Java applications between Browser-based enterprise systems and cloud systems Command Line **Eclipse IDE** DevOps **IBM Cloud and Enterprise Offerings** Java and other runtimes Manage and administer apps Liberty **Tomcat** Cloud Admin Dashboard WebSphere. Scaling, load testing, monitoring, and other cloud services

Enterprise Java application servers

Target Tomcat, JBoss, WebSphere

Run Java/Spring or J2EE on PaaS, Docker, or VMs

Target Tomcat, WAS on Cloud, WAS Liberty, or bring our own

Recap

How developers can adopt simple steps to get Java skills transferred to the cloud:

- Understand and plan the application architecture on the cloud
- Manage the application on the cloud or in the enterprise by using similar tools

Leverage the cloud, its features, and its powerful services
